

Distribution of Quality Control to the Point of Data Collection in the Field: Impacts on Cost, User Experience, and Security

Andrea Johnson (U.S. Census Bureau)

Jonathan Krentel (Gunnison Consulting Group, Inc.)

Why Collect Housing Unit Locations?

- Accurate housing unit location matters

2010 Address Canvassing Map Spot Collection

1) Locate Housing Unit

2) Locate GPS "you are here" indicator on map

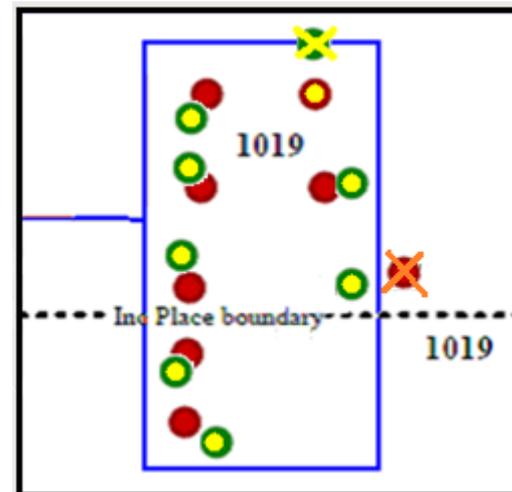

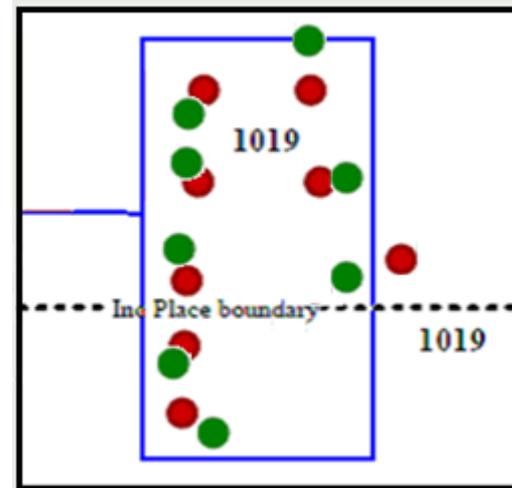

3) Tap on map

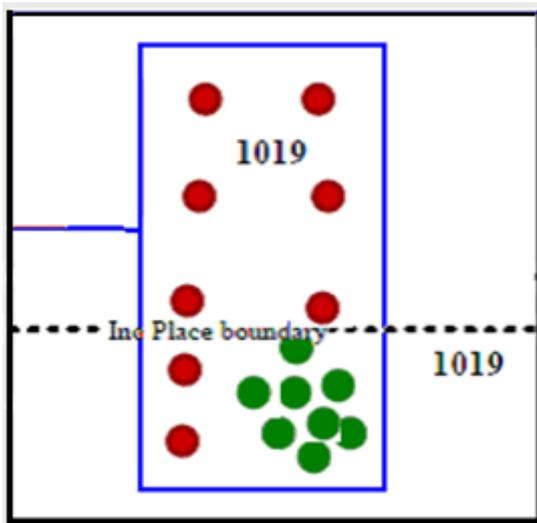

4) Confirm location of map spot (from tap)

Map Spot Collection Results

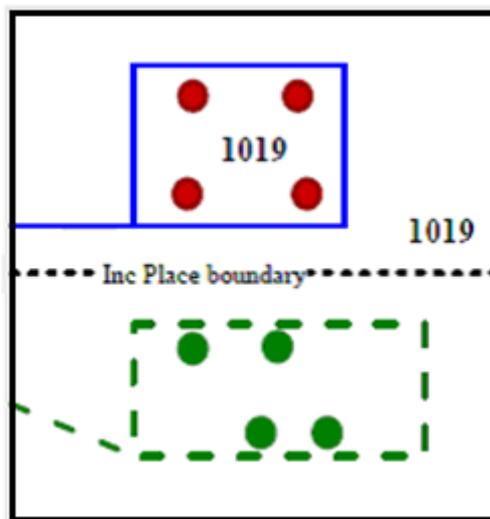

- 106,000,000 Map Spots collected
- For every map spot collected, two coordinate pairs were returned to the Census:
 - Manual
 - GPS
 - Only one point is “preferred”
- Three primary outcomes:
 - GPS = Manual
 - GPS location correct but manual location wrong
 - Manual location correct, GPS is wrong

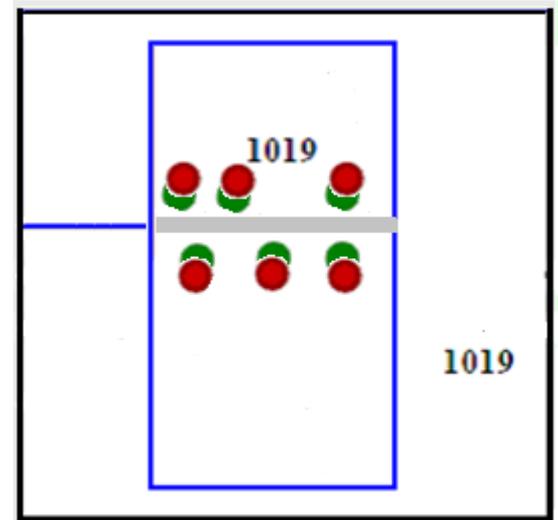

Map Spot Collection Issues that Required Resolution

Curbstone Clusters
~ Workload: 210,000

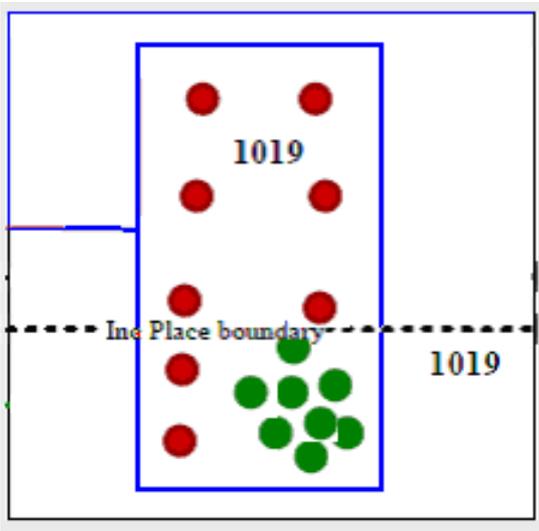

Map Spot Reconciliation
1,500,000

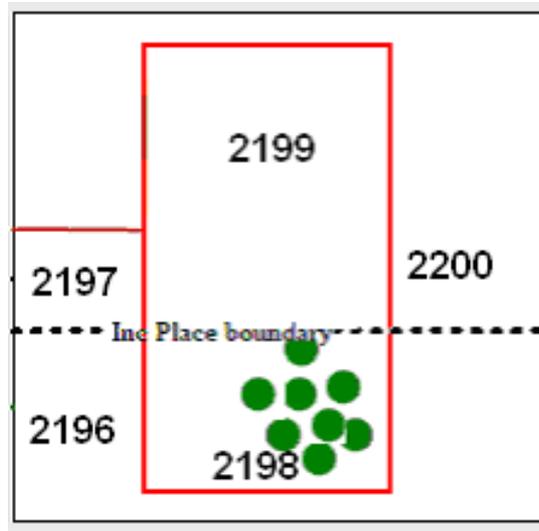

Feature Name Reconciliation
1,150,000

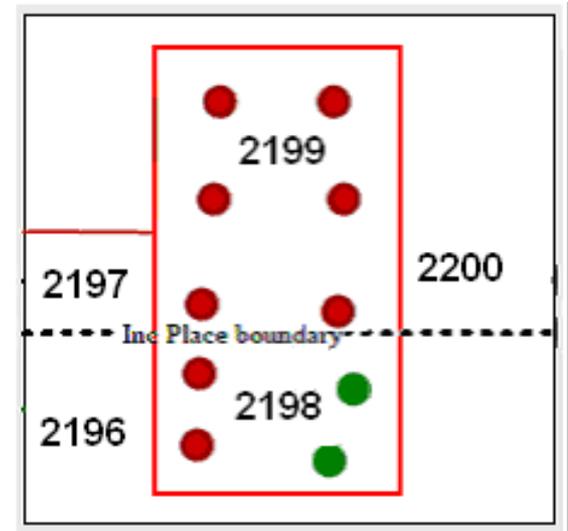

Curbstone Clusters Resolution

A) After Collection

B) If GPS Accepted and No Manual Review

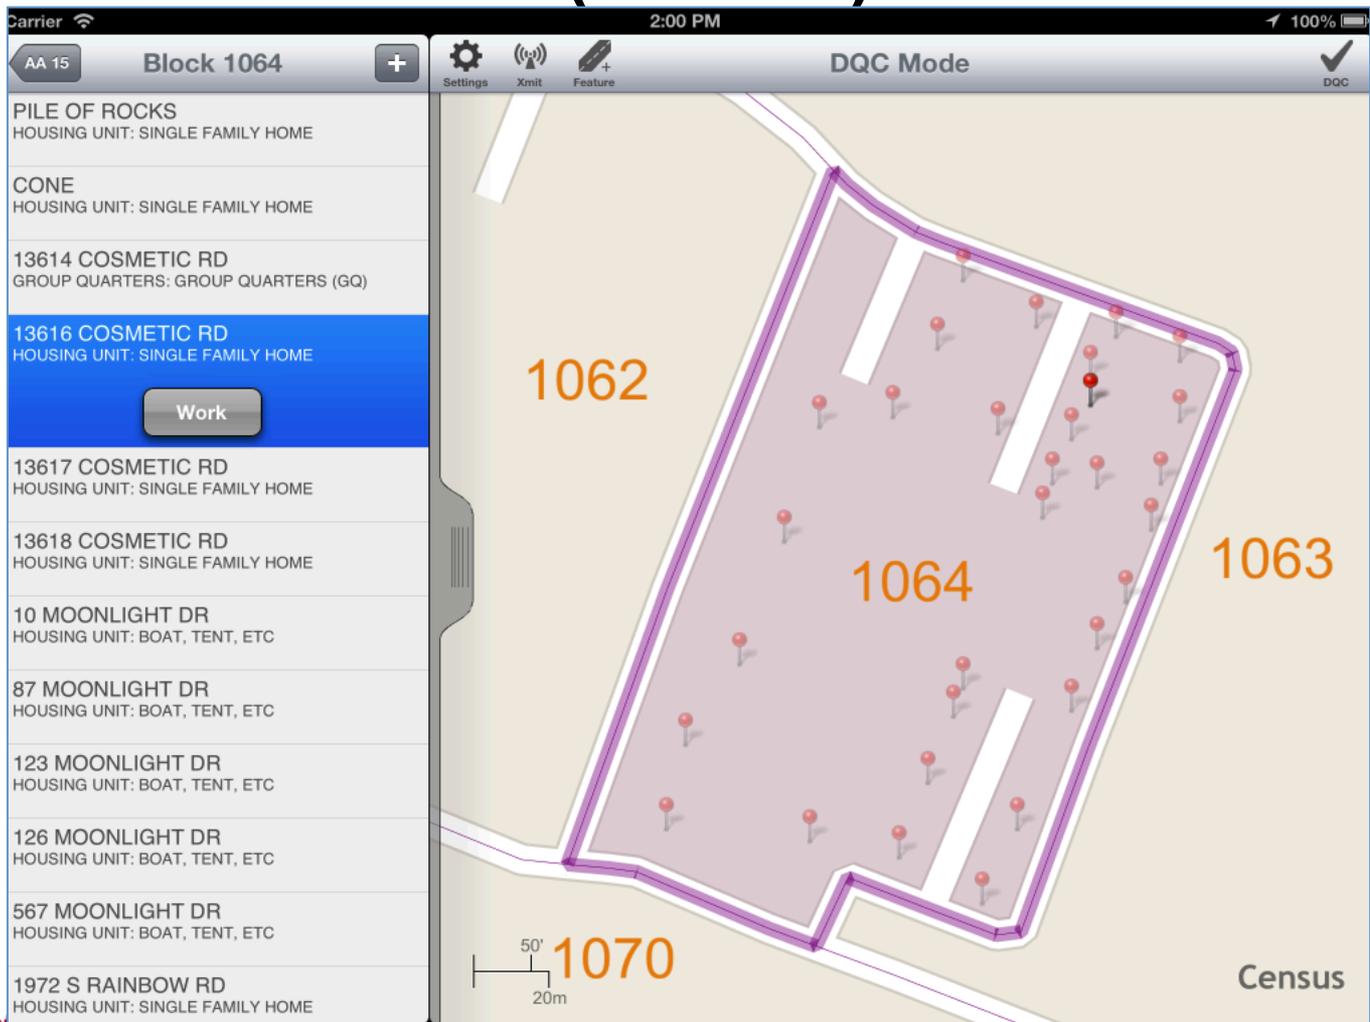

A) After Manual Review

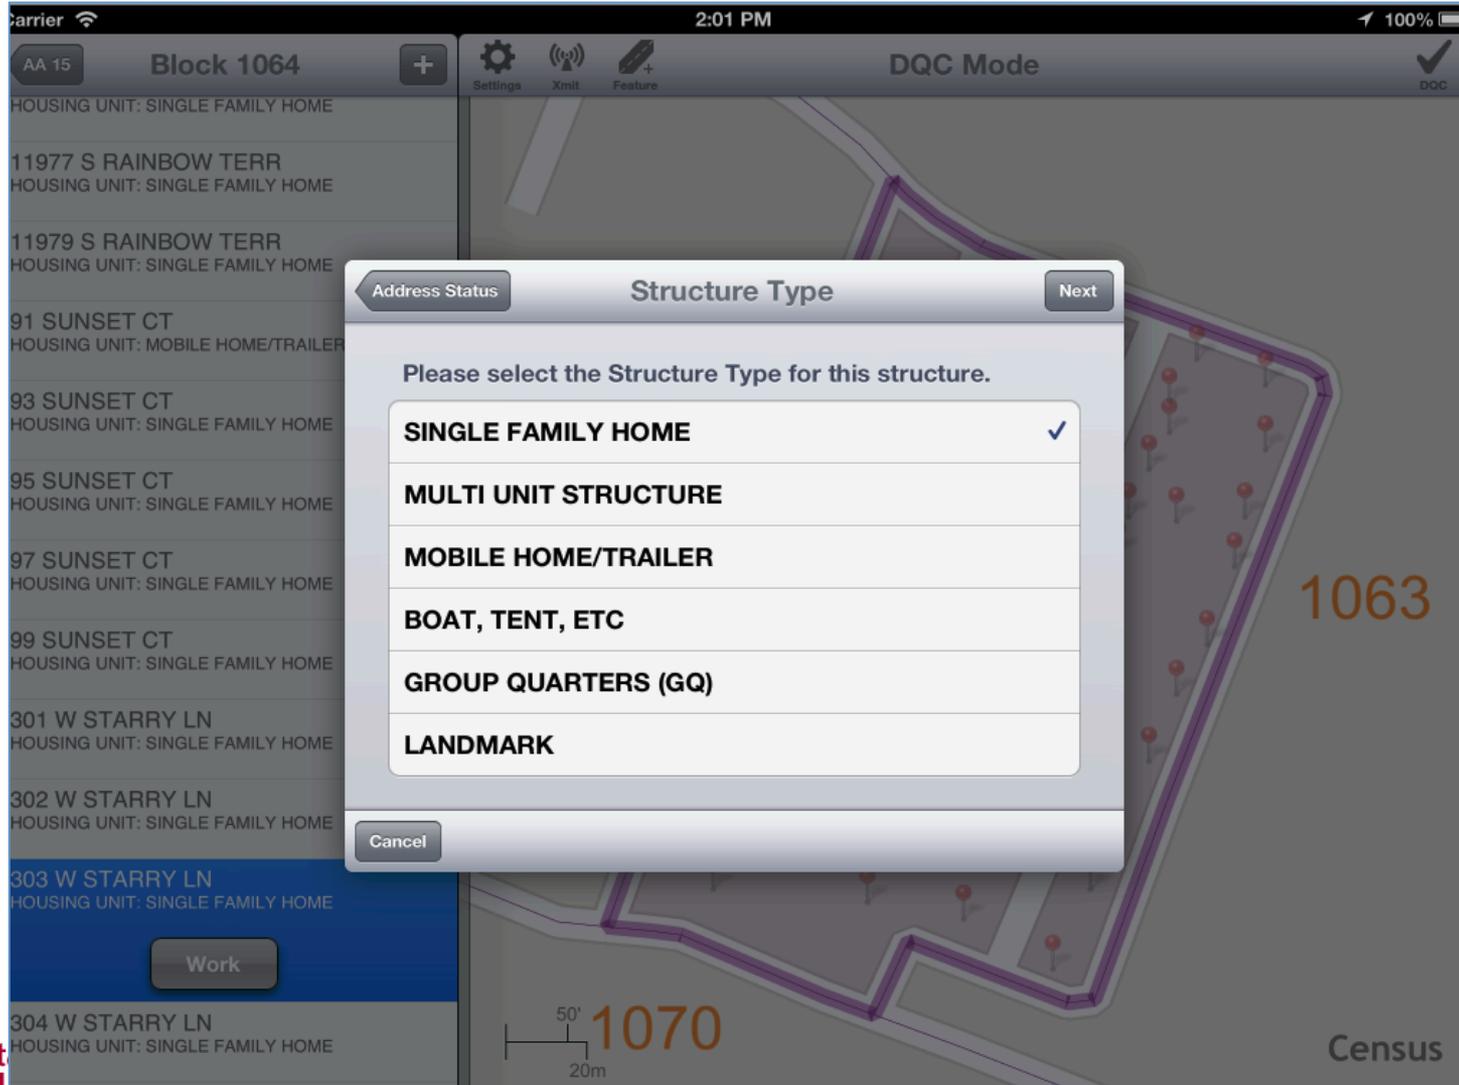

High Cost of Manual Resolution

2009 Curbstone Cluster Project Staff Resource			
Task	People	Job Code	Total Hours
Develop Procedures	1	Geographer	120
Conduct Training	4	Geographers	128
Monitor Analysis	4	Geographers	128
Resolve Referrals	3	Geographer	384
Training	27	Clerical	864
Peform Analysis	27	Clerical	8208
Conduct Quality Control	4	Supervisory Clerical	384
Misc IT (Upload, Systems Dev)	3	IT Specialists	180

Listing & Mapping Application (LiMA)

LiMA: Structure Type

LiMA: Address Status

LiMA: Location Address

Carrier 2:01 PM 100%

Structure Type Location Address Next

Please enter the location address.

Street Unnamed/Unknown Yes No

30 W STARRY LN 20752

House Number Street Name Unit Descriptor Unit Number ZIP Code

Location/Physical Description BLG 2 EAST PARKING LOT--... Subdivision Name

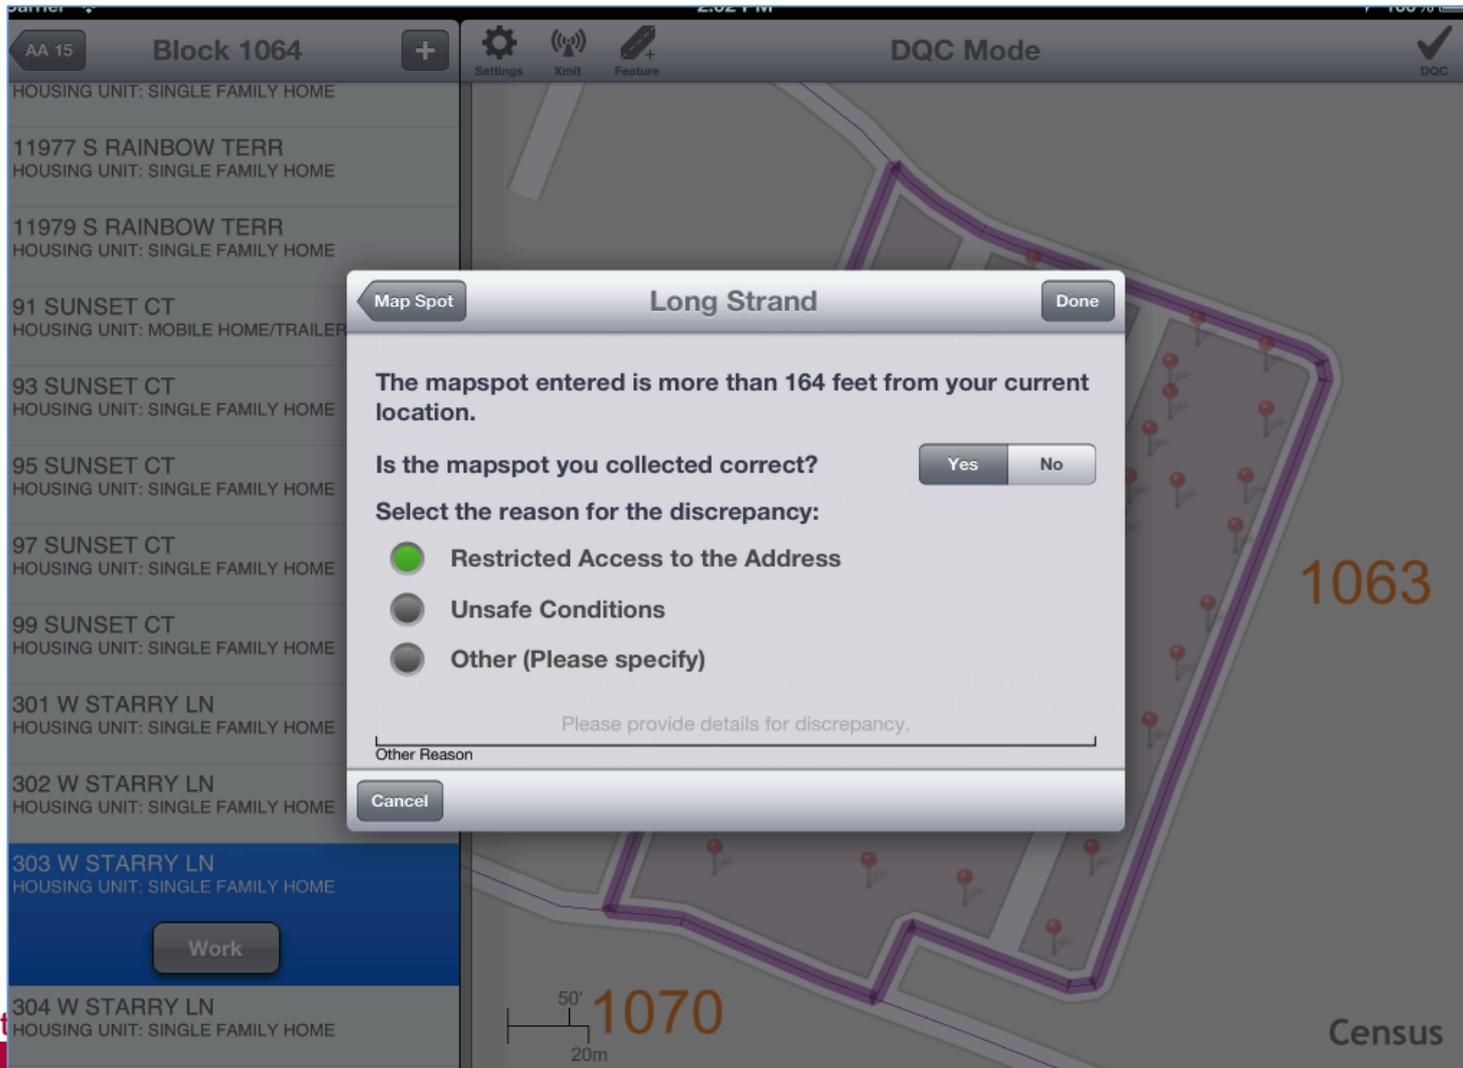

Cancel

House Number
May contain: A-Z, 0-9, spacebar, -, /
May not contain the words: NONE, UNKNOWN or UNNAMED
May not change without also modifying Street Name.

LiMA: Map-spotting

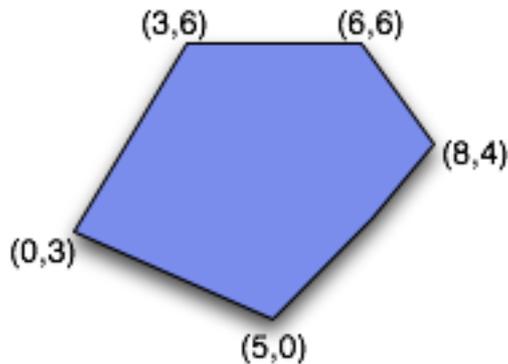

LiMA: Long Strand

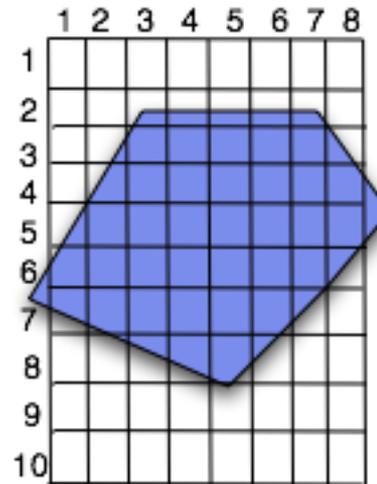

Mapping Considerations

Locally rendered vector-based maps
vs. tile-based maps

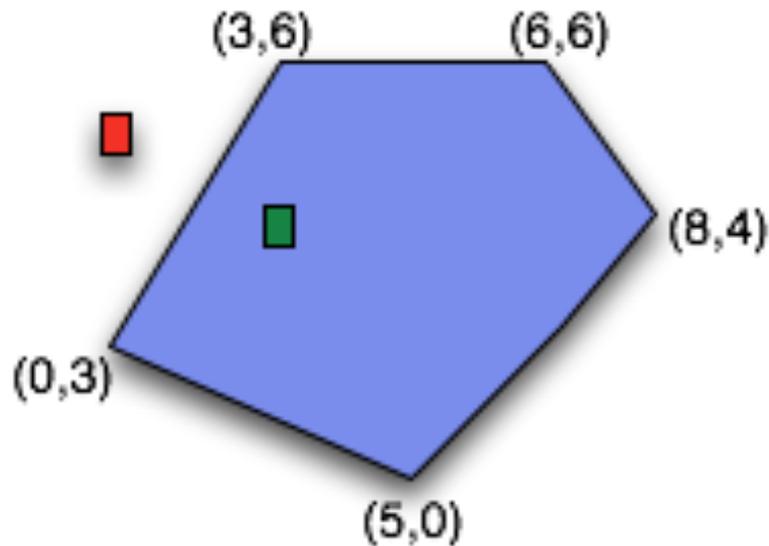

VS.

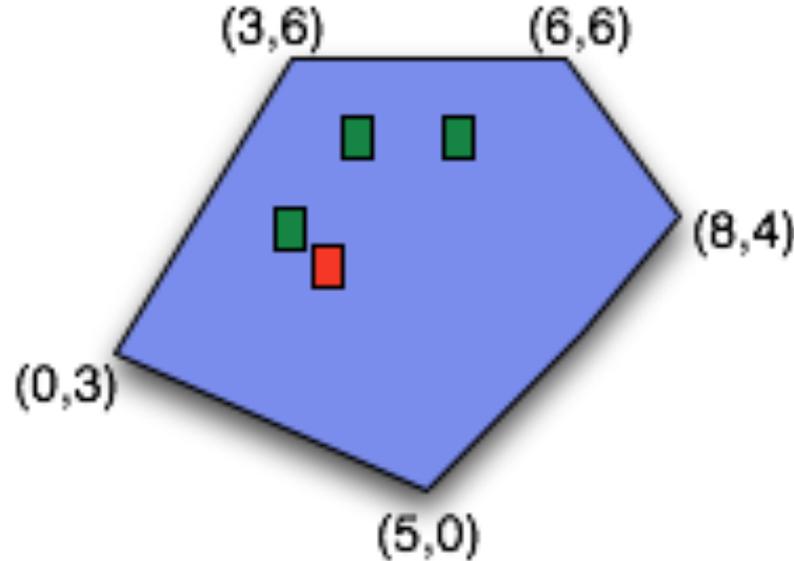

Benefits of vector-based maps (1)

Quality = Spatial-awareness

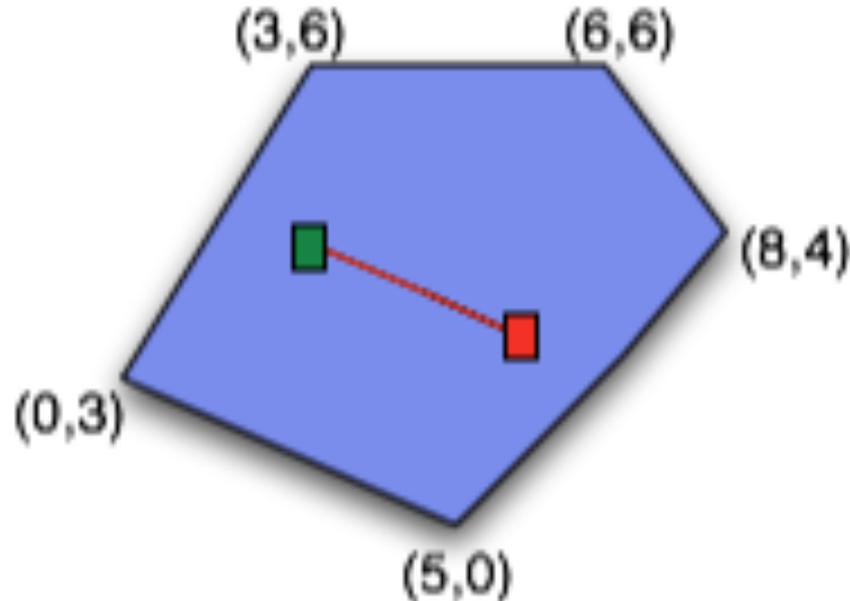

Benefits of vector-based maps (2)

Quality = Real-time detection of clustering

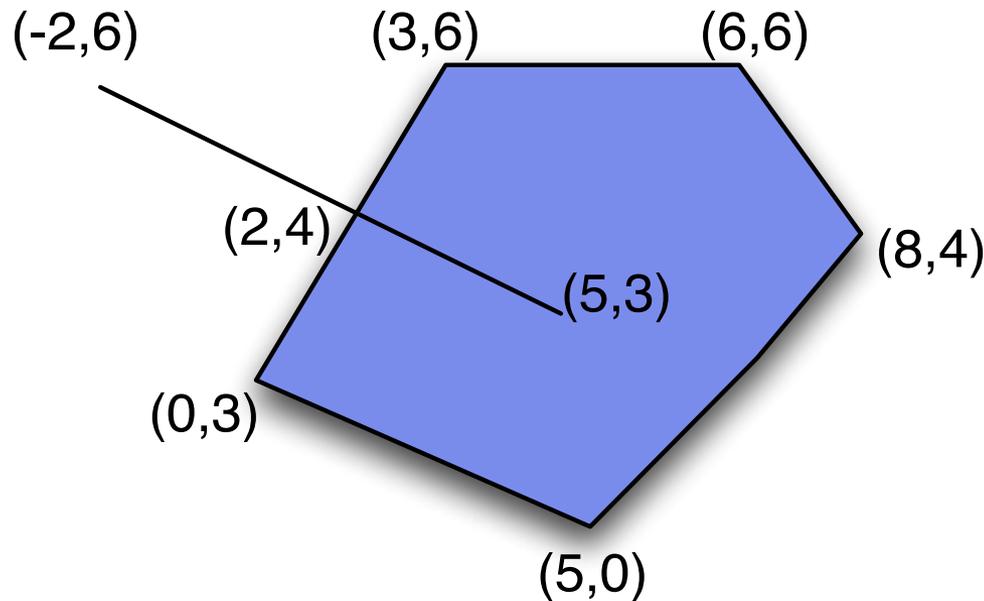

Benefits of vector-based maps (3)

Quality = Real-time long strand detection

Benefits of vector-based mapping (4)

Quality = Maintain topological integrity
when adding or updating features

“Thick Client” Technical Approach

- Benefits:
 - Rich data on the device
 - All objects on the map are programmatically addressable
 - Allows for locally executed Quality Control
 - Potentially eliminates the need for expensive post-processing operations
 - Allows for QC to take place by the person in the best position to make corrections
 - Enables native user experience
 - Mitigates connectivity risk
- Risks:
 - Multiplication of code bases = BYOD risk?
 - Data on the device = Security risk?
 - Heavy processing load on the device = Performance risk?
